                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -!- MISCELLANEOUS: The sequences of 10 hybridoma proteins that also bind dextran differ from that shown at 1-7 positions, many of which occur in the D and J segments.
-!- MISCELLANEOUS: This protein binds dextran.
-!- SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.

--- MISCELLANEOUS: This chain was isolated from a myeloma protein that binds phosphorylcholine.
--- SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Archaeal adaptation to higher temperatures revealed by genomic sequence of Thermoplasma volcanium.";
Proc. Natl. Acad. Sci. U.S.A. 97:14257-14262(2000).
-!-CATALYITT ACTIVITY: ATP + L-asparagine + tRNA(Asn) = AMP + diphosphate + L-asparaginy-tRNA(Asn).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUMILARITY: Belongs to the class-II aminoacyl-tRNA synthetase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PRINTS; PRO1042; TRNASYNTHASP.

ribulose 1,5-bisphosphate, the primary event in photosynthetic
carbon dioxide fixation, as well as the oxidative fragmentation of
the pentoses substrate in the photorespiration process. Both
reactions occur simultaneously and in competition at the same
active site (By similarity).
CATALYTIC ACTIVITY: D-ribulose 1,5-bisphosphate + CO(2) + H(2)O =
                                                                                                                                                                                                                                                                                                                                                        Gaps
